

Supports:

iPhone 4, 4s, 5, 5s, 5c, 6, 6Plus

iPad 3, 4, Air, Air 2, Mini 2, Mini 3

Needed:

Winterboard or Anemone (recommended).

iWidget for the home screen widget

LockHTML4 (recommended) or GroovyLock for the lockscreen widget

Anchor for placing your icons below the widget

AIR comes with:

172 icons including true 180p icons for 6Plus and iPad icons

Square and Round icon styles/masks

Icon shadows and overlays for both Anemone and Iconomatic
Wallpapers

Special Long-Shadow mod for icons

AIR Widget for iWidgets, LockHTML4, SBHTML and GroovyLock

4 different badges

Statusbar theming
AIR-Respring logo
Loading-screens
themed Settings
Zeppelin logo
Icon PSD and Photoshop action for you making own icons

NOTE: Some of this Features are free separate packages, all available at Cydia.

All available AIR packages:

AIR Theme
AIR Badges
AIR LoadingScreens
AIR LongShadowIcons
AIR Widget GroovyLock
AIR Widget SBHTML
AIR Widget (*for iWidgets and LockHTML4*)
AIR Zeppelin
AIR StickerIcons

The widget has it's own setup menu, is freely placeable anywhere and fully supports the following seven languages:

English, Spanish, French, German, Italian, Turkish and Danish. The widget supports 12/24 hours, Celsius/Fahrenheit and you can use a **location codes** or **GPS localization** for the weather.

SETUP

Theme:

Enable the **AIR.theme** from Winterboard or Anemone. For **round icons also** enable **AIR Round icons.theme** (**make sure all additional AIR packages are listed above the main theme to work (see screenshot at FAQ)**)

Wallpapers

Stored inside the folder *AIR.theme/Wallpapers* . Save them with iFile or Filza to your camera roll and apply from your photos app.

Widgets:

This widget uses **Yahoo location code for the weather**, please **don't use Weather.com codes or ZIP codes or anything else**. To find your Yahoo location code open this website <https://weather.yahoo.com> search for your city and then take a look at the adressbar of your browser, the last 6 or 7 digits is your Yahoo location code. For **GPS** functionality of this Widget you also need the free tweak **WidgetWeather2** from Cydia store.

- iWidget:

Enable *AIR Widget* by long-pressing on your display and make the setup at the popup-menu.

- LockHTML4 (recommended for Lockscreen widgets):

Start Settings/LockHTML4/ and apply the *AIR Widget* and make your setup at it's menu. You can freely place this widget on your lockscreen (long-press) or set coordinates at the LockHTML4-Settings

- Groovylock

Start Settings/Groovylock and apply *AIR Widget Groovylock* and make your setup at it's menu. You may have to manually open LockBackground.html with iFile and change the values for "top" and "left" there to fit it to your screen.

- SBHTML (Groovyboard)

Enable the widget from Settings/SBHTML. You may have to manually open Wallpaper.html at User/Library/SBHTML/AIR widget../Wallpaper.html with iFile or Filza and change the values for "top" and "left" there to fit the position to your screen and device

Thinks you should know:

The Modern-dock (3D dock), dock reflection, themed icon folders and new badges are Anemone-only features. This isn't possible with Winter board unless you download tons of additional tweaks....or better just use Anemone 😊

IconOverlay and Icon Shadows:

The AIR theme already includes a discreet icon overlay and shadow for round and square icon style. With **Anemone** it works out of the box. If you want the LongIcon shadows you must also enable the round or square LongShadow.theme at Anemone. Make sure they are listed above the main theme at Anemone.

If you use **Winterboard** and want icon overlays and icon shadows you also need the tweak **Iconomatic** and apply the build-in Air Icon overlays and shadows for round and square icons at Iconomatic. The LongShadow mod currently doesn't support Iconomatic.

The StickerIcons mod is another separate theme, apply it from Anemone or Winterboard. Make sure it's listed above the AIR theme and all other icon mods and you have only the AIR theme and the StickerIcons theme enabled.

OFFICIAL THEME FORUM:

Please use this forum for further questions, icon requests and help:

<http://modmyi.com/forums/iphone-5-new-skins-themes-launches/846309-air.html>

LATEST UNRELEASED ICONS: [https://](https://www.dropbox.com/sh/9fl55i13y...TcJSsNkNa?dl=0)

www.dropbox.com/sh/9fl55i13y...TcJSsNkNa?dl=0

> copy all bundle folders to *Library/Themes/AIR.theme/Bundles/...here* and respring with Winterboard or press "Apply" at Anemone

ICONS:

The theme includes a Icons PSD and a Photoshop-action (for quickly creating long-shadows). You're welcome to post your icons at the AIR forum.

About the style:

Off-centered, free placeable, partly transparent glyphs with a small solid white frame and with long shadows. Color gradients (=backgrounds) are possible from any direction and color you like.

Usually we need this 6 icons/sizes for a iPhone theme:

- * 58x58 p icon (Settings i5-i6, often called 29x29@2x)
- * 87x87 p icon (Settings i6Plus, often called 29x29@3x)
- * 80x80 p icon (Spotlight i5-i6, often called 40x40@2x)
- * 120x120 p icon (Spotlight i6Plus, often 40x40@3x)
- * 120x120 p icon (Homescreen icons i5-i6; often called 60x60@2x)
- * 180x180 p icon (Homescreen icons i6Plus, often called 60x60@3x)

and for Retina iPads:

- * 58x58 p icon (often called AppIcon29x29@2x~ipad)
- * 80x80 p icon (often called AppIcon40x40@2x~ipad)
- * 152x152 p icon (often called AppIcon76x76@2x~ipad)

Manual (pictured) for working with AIR Photoshop-actions:

FAQ:

What is Anemone ?

Anemone is a new and better Winterboard, it's free and replaces it completely, it works with every winterboard theme, you don't have to delete, modify or reinstall any of your favorite themes.

Winterboard has lost most of it's former functionality over the last years. With Anemone you have features like Theme preview, dock theming,

badges theming, theme fonts, folder theming, icon shadows and icon overlays and much more without the need to install any other tweak like

Iconomatic, Bytafont, dock, folder and badges tweaks and so on.

You can test it right now for free:

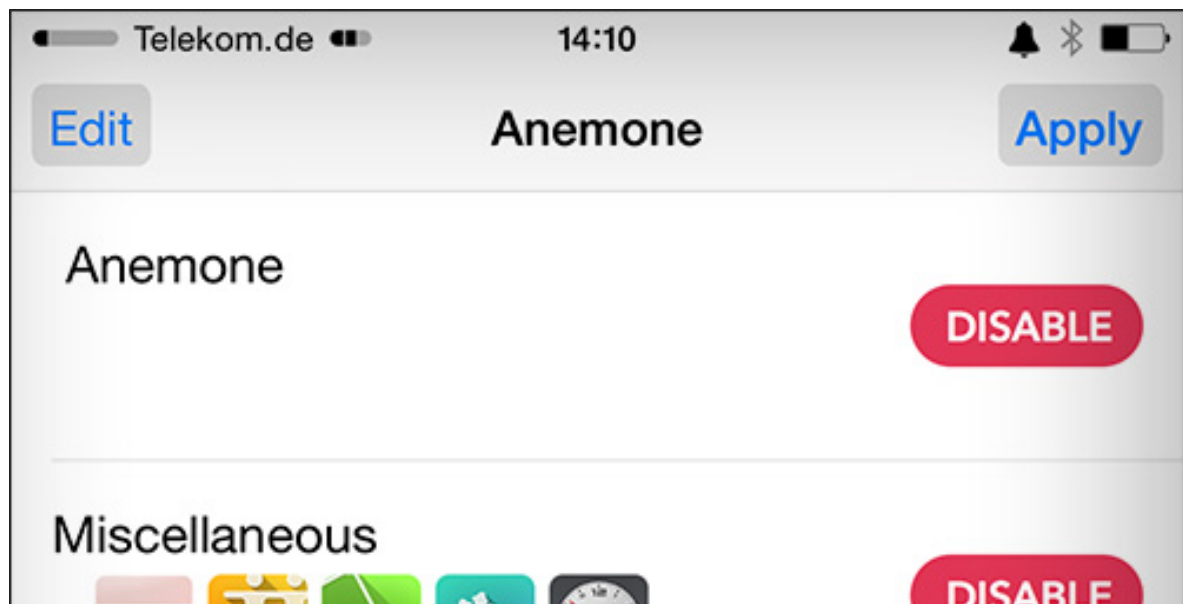

First install Anemone from this repo and then uninstall

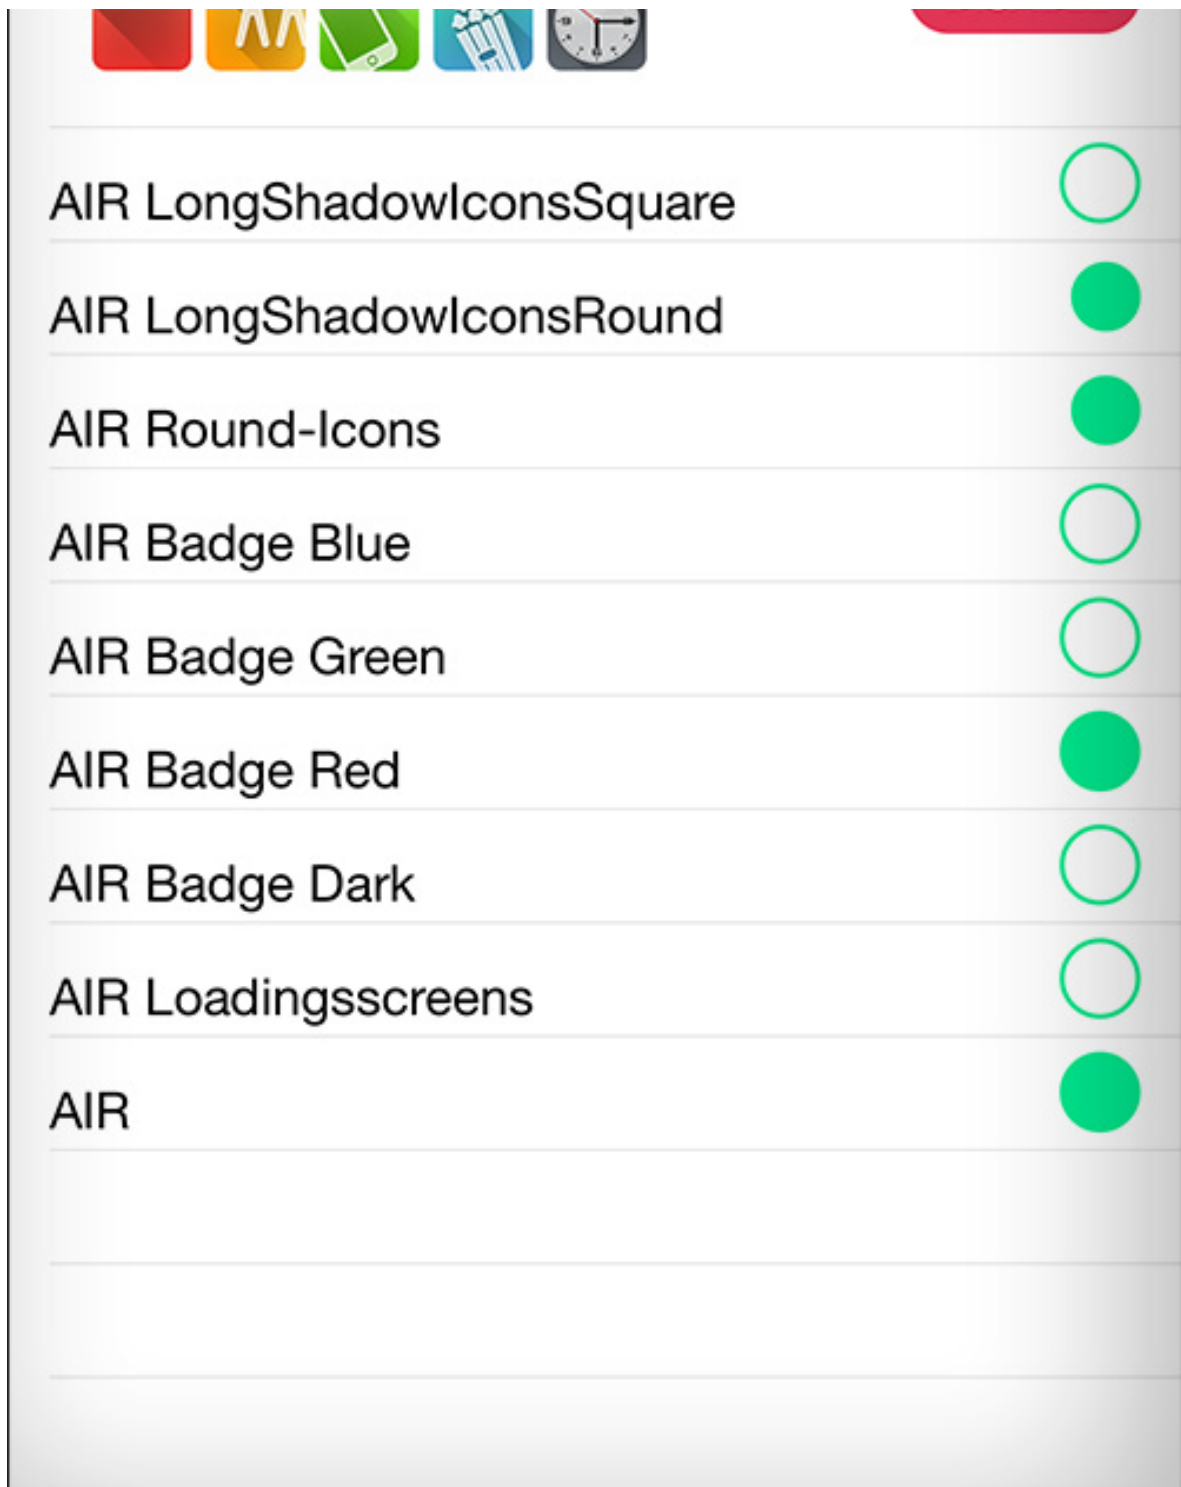

Winterboard: <https://anemonetheming.com/nightly/>

If you want to switch back to Winterboard, first install

Winterboard and then uninstall Anemone (!)

With this method your themes won't be uninstalled.

CREDITS: to Eric for help with the widget, all beta testers and Sital and blopblop for more icons
