

Existenz MOD set up.

You need:

Five-Column-SpringBoard (free from Cydia)

Icon Renamer (free from Cydia)

If it isn't already, activate Five-Colomn-SpringBoard via the settings app.

Set up your springboard icons on page 1 like this:

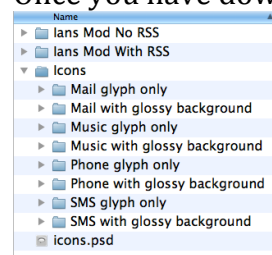

Get rid of the icon text.

To get rid of the icon text for the clock, calendar & weather install "Icon Renamer" To use it just press & hold any icon till they start wiggling, then tap on the "Clock" icon, Icon Renamer will now kick in, just delete the word "Clock" then press the space bar, then press your home button. Do this with the weather and calendar icons too.

Change the 4 icons for the calendar widget.

Once you have downloaded and unzipped the MOD you should have this files:

Lets start with the "Mail" icon

Decide which one you want (with glossy BG or just a glyph) Lets assume you want the glossy one.

Open the "Mail with glossy background" folder to see the icon(s).

On your phone navigate to "Library/Themes/Existenz.theme/Bundles" folder.
(All 4 icons are in here)

Open the com.apple.mobilemail folder and re-name the "Icon.png" to "IconXX.png" (this will be your back-up of the original icon) Next, transfer the "Icon.png" from my mod to replace the one you re-named.

Do this with the other 3 too. (note, some have 2 icons)

"Phone" icon is in "com.apple.mobilephone"

"Music" is in "com.apple.mobileipod"

"Messages" is in "com.apple.MobileSMS"

Install the MOD.

Transfer the mod you want (with or without RSS) to:

Var/mobile/Library/PerPageHTML, for PerPageHTML+ users transfer both mods to this folder, for PerPageHTML users the mod of your choice has to replace the Existenz-Page1.

REMEMBER TO SET YOUR WEATHER CODE AGAIN.

YOU WILL ALSO NEED TO INPUT YOUR RSS FEED AGAIN.

A small amendment to these instructions, I removed the mod with the rss feed on the dock, so the part of the instructions that refer to “choose your widget” is incorrect, now there is only one widget.
