

How to install I-Flowers

I-Flowers is a theme which comes with a lot of goodies:

- A lockscreen
- 12 Categories icons and a background folder for each
- Applications are themed
- a Uiimages folder
- a grey BGFolder
- a clock in the springboard

It's a Palm pre style theme which uses springjumps

1/ Install the theme

Step 1

Download the programs below on Cydia:

-  Categories
-  Springjumps
-  Five Icon Dock (free)
-  Gridlock

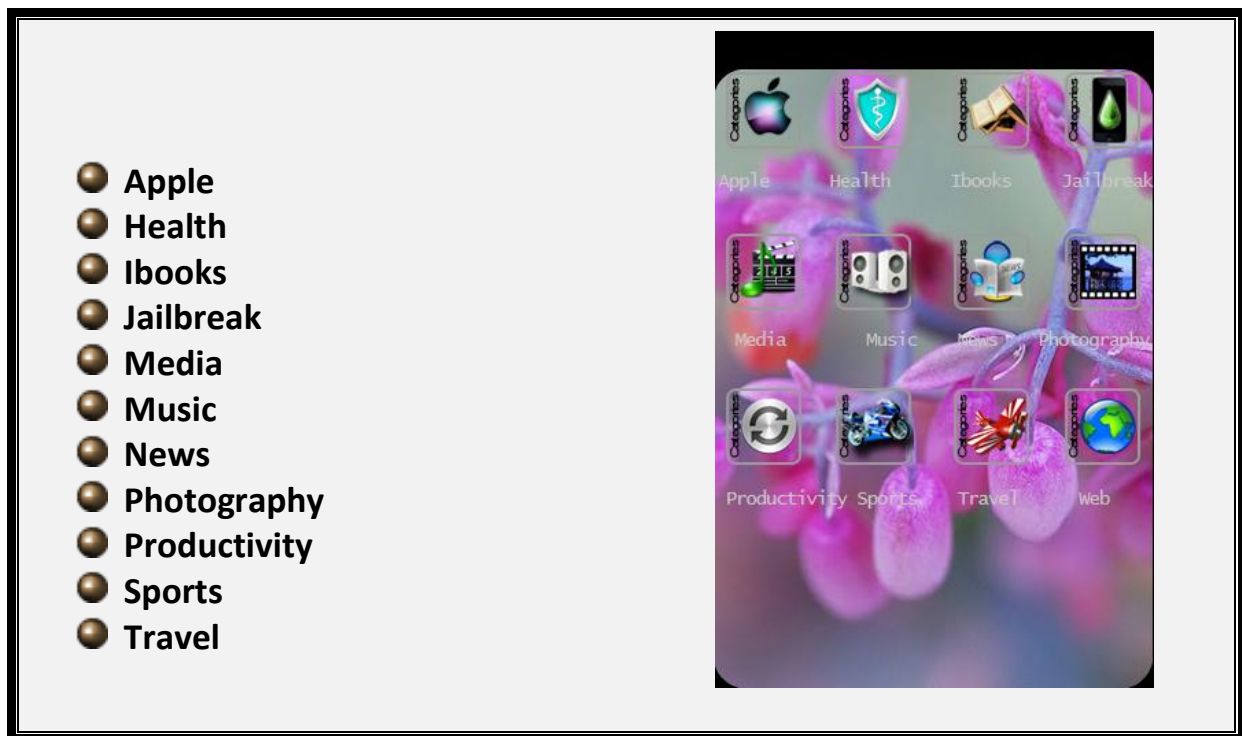

Step 2

Configure Categories

Don't forget: this step is very important. If you do not make it correctly, the background will not be in right place.

For each category, you must assign an icon. With a SSH connection, put the Cat-icons folder in:
/mobile/Library/Categories/Icons

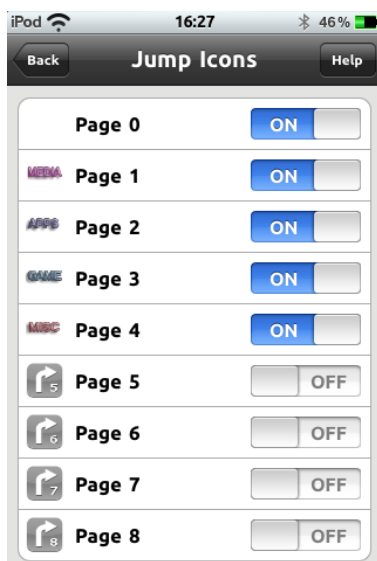

You must create 12 Categories icons that correspond to 12 folders. It's mandatory to use alphabetic order if you want that the theme assigns the right background to the right folder. Look at the description and the order of icons in the table below:

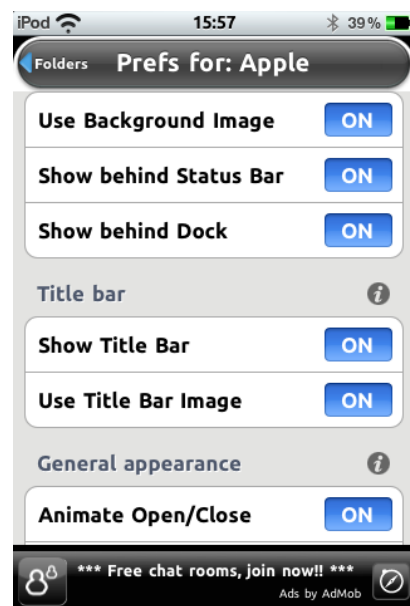

Keep your favorite applications in the Categories folders. Manage the folder's options for all categories as shown picture 1.

Step 3

Configure Springjumps:
Create five pages from 0 to 4

Picture2

Picture 1

Step 4

Using Gridlock, arrange the icons on the springboard and on the dock. You have five page: home, Media, Apps, Game and Misc.

See the two examples below :

Step 5

Enable the theme in Winterboard.
