Last step! Take number that you copied, use SSH or iFile to go to widget.

Widget is in var/mobile/Library/iWidgets. Open Widget.html, scroll down and paste number that you copied in the line seen below.

```
<!-- Go to Twitter, select settings, Widgets, select list that you want to use
      don't worry about other options, click Create Widget, copy long number
      from the url and paste it below in data-widget-id -->

<a class="twitter-timeline" href="https://twitter.com/Wardever/jailbreak"
  data-widget-id="435477799759917056" data-chrome="nofooter noheader transparent"
  data-theme="light" lang="EN" data-aria-polite="polite" data-border-color="#000"
  width= 270px height= 280px><br />
  Loading...</a>
<!-- Change language above ^^^ --->
```

You can change the name of the href address if you would like, but it will not make a difference.

As you add new people to the list they will automatically be added to the iWidget stream.

The full size Twitter iWidgets were created to fit on a 5x5 page with only room for one row of icons. Use iconoclast to change layout, or use the mini Twitter iWidgets.

Enjoy!
